

As-of Connection Record Certificate

Project: Clash Gour

Dates certified: 2021-03-31 and 2025-07-22

Certificate id: 81bca965872abc7df2d6c228fa96091fb9974dda27fb007a65899fe89a46a442

Issued: 2026-09-15 by A115 Ltd (Grid Mysteries)

Register copies consulted: 375 (2021-03-30 to 2025-07-22); 1 with no matching row, 0 ambiguous

Independently verifiable provenance, publication time and reconstruction methodology, suitable for scrutiny by counsel, experts, lenders and regulators.

1. What the register published on each date

Field	As published on 2021-03-31 (copy of 2021-03-30)	As published on 2025-07-22 (copy of 2025-07-22)
Project name	Clash Gour	Clash Gour
Customer name	EDF ENERGY RENEWABLES LIMITED	EDF ENERGY RENEWABLES LIMITED
Connection site	Clash Gour Wind Farm 132kV	Clash Gour Wind Farm 132kV Substation
Stage	—	—
MW connected	0	0
MW increase / decrease (stage TEC)	210	210
Cumulative total capacity (MW)	210	210
MW effective from (target date)	2024-10-30	2029/10/30
Project status	Awaiting Consents	Awaiting Consents
Agreement type	Directly Connected	Direct Connection
Host TO	SHET	SHET
Plant type	Wind Onshore	Energy Storage System;Wind Onshore
Project ID	—	a0l4L0000005iaaQAA
Project number	—	PRO-001022
Gate	—	—

Copy in force on 2021-03-31: SHA-256 86cadc429add117fcef5b418ce91d1d768a8306c3a186a2a661aba2c2a399254

Copy in force on 2025-07-22: SHA-256 d875470279cc562b07fbe128ecc66f6215711614eee8bf5134012dbbec97bde3

2. Every change between the two dates

Each change is dated by the first copy of the register that showed it; the previous value is dated by the last copy that still carried it. Between those two copies no copy is held, so the change entered the published register somewhere in that interval.

#	First shown in copy of	Field	Previously published (last seen in copy of)	Newly published
1	2021-04-06	MW effective from (target date)	2024-10-30 (2021-03-30)	2025-10-30
2	2021-11-26	Project ID	— (2021-11-23)	a031v00000sxAoS
3	2022-08-24	Project ID	a031v00000sxAoS (2022-08-19)	a0l4L0000005iaa
4	2022-12-13	Connection site	Clash Gour Wind Farm 132kV (2022-12-09)	Clash Gour Wind Farm 132kV Substation
5	2023-11-28	Presence	present (one row) (2023-11-24)	absent
6	2023-12-01	Presence	absent (2023-11-28)	present (one row)
7	2024-05-17	MW effective from (target date)	2025-10-30 (2024-05-14)	2027-10-30
8	2024-05-17	Plant type	Wind Onshore (2024-05-14)	Energy Storage System; Wind Onshore
9	2024-05-24	Agreement type	Directly Connected (2024-05-21)	Direct Connection
10	2024-05-24	Project ID	a0l4L0000005iaa (2024-05-21)	a0l4L0000005iaaQAA

18	2024-05-31	Project ID	a0l4L0000005iaa (2024-05-30)	a0l4L0000005iaaQAA
19	2024-06-18	Project number	— (2024-06-14)	PRO-001022
20	2025-07-01	MW effective from (target date)	30/10/2027 (2025-04-01)	2029/10/30

3. Scope

This certificate states what NESO's published Transmission Entry Capacity (TEC) Register said about the named project on each of the two dates, and every change between them, each with the first copy of the register that showed it. It is a factual record of publication. It contains no forecast of energisation, no view on the cause of any change, and no opinion on any party's contractual entitlement. NESO's own caveat applies: project status in the register is NESO's best-known classification, not authoritative project information.

4. Method

Copies of the register (vintages) come from NESO's disclosures under the Environmental Information Regulations (one file per publication date), Wayback Machine captures of the data-portal resource, and live fetches of that resource; each copy's publication date and its SHA-256 are journalled at acquisition. The copy in force on a date is the latest published on or before it. Rows are matched to the project by the register's own project name (letters and digits, case ignored) and, where stated, stage; customer name and connection site are attributes whose changes are recorded. A copy with no matching row is an absence and one with several is ambiguous; both are recorded as changes of presence. Values are compared as published, with dates parsed (so a respelled date is not a change), numbers compared numerically and text compared ignoring case and whitespace; the printed values are the published spellings.

5. Evidence bundle

This certificate is rendered from `certificate.json` in the bundle and from the bundle's manifest. The manifest (`MANIFEST.json`, SHA-256 `81bca965872abc7df2d6c228fa96091fb9974dda27fb007a65899fe89a46a442`, which is the certificate id) lists 5 files with their digests: the certificate record, the rows matched in every copy consulted (`extracts.ndjson`), the journal lines that identify each copy's source, publication basis and digest (`journal-extract.ndjson`), and the two full register copies in force on the certified dates (`registers/`). This document quotes the manifest's digest and so is not listed in it; it is witnessed beside it. Run `python3 verify.py` in the bundle to recompute every digest offline. The manifest's digest and this document's are each witnessed by OpenTimestamps and by RFC 3161 tokens from two authorities, in the files beside them.

Series declaration under which the register archive is maintained: SHA-256 `e4aba4c923b58e9c36e10d16d9a715d6cae1ce90081c9ed1f1b8bf5196f8c01a` (`investigations/014-gb-connection-slippage/DECLARATION.md`).

A115 Ltd (Grid Mysteries). Factual findings only; no expert opinion is expressed. Reproduction of the method is invited; the code and tests are public.
